

PACKAGING WITHOUT LIMITS

Extera's Custom Container Solutions

Why Container Customization Matters

No two supply chains are alike. Every product, from fragile electronics to heavy-duty components like car parts, has unique storage and shipping demands. Off-the-shelf containers can only go so far, which is why Extera specializes in container customization. We design containers, lids, dunnage, and identification systems to your specifications so you get better product protection, smoother warehouse workflows, and smarter tracking.

Backed by decades of experience and a vast network of trusted U.S. vendors, we build durable, repairable, and recyclable modifications, keeping performance and sustainability front and center. This guide highlights the [customizable options](#) available and how Extera adapts containers to fit your business.

ORGANIZE & PROTECT

Internal Custom Features

Dividers

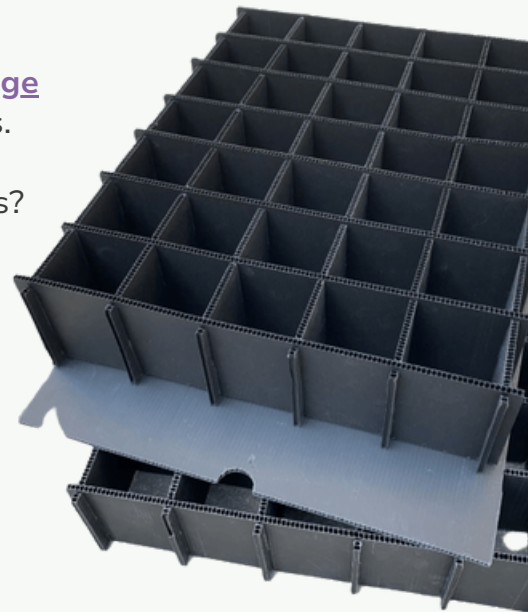

Dividers keep products separated, secure, and organized inside containers and totes. They prevent shifting and minimize damage when moving fragile electronics, automotive components, or bulk items. Extera offers multiple materials and thickness options, cut to precisely fit your containers. Dividers can be removable for flexibility or permanent for repeat-use workflows.

- Multiple materials and thickness options
- Cut to fit standard or modified containers
- Removable or fixed designs
- Ideal for part separation and protection

Dunnage Inserts

From foam cushioning to rigid thermoformed trays, [dunnage](#) creates a protective environment tailored to your products. Need abrasion resistance for painted components? Fabric dunnage prevents scratches. Shipping oddly-shaped items? Corrugated plastic inserts provide adjustable support. Extera works with you to [design dunnage](#) that's reusable, lightweight, and durable for the long haul.

- Foam, fabric, or rigid plastic inserts
- Custom cavities for precision fit
- Long-lasting, reusable designs
- Suitable for scratch-sensitive or heavy items

Sleeve Packs

Sleeve packs add scalable volume and collapsibility to your supply chain. Built with rigid sides and a collapsible body, they provide strength in transit and space savings during return or storage.

- Durable construction & reusable
- Collapsible design for return logistics
- Available in multiple sizes and wall strengths
- Compatible with custom lids and bases

IDENTIFY & TRACK

Custom Labeling, Expert Tracking

ID Tags

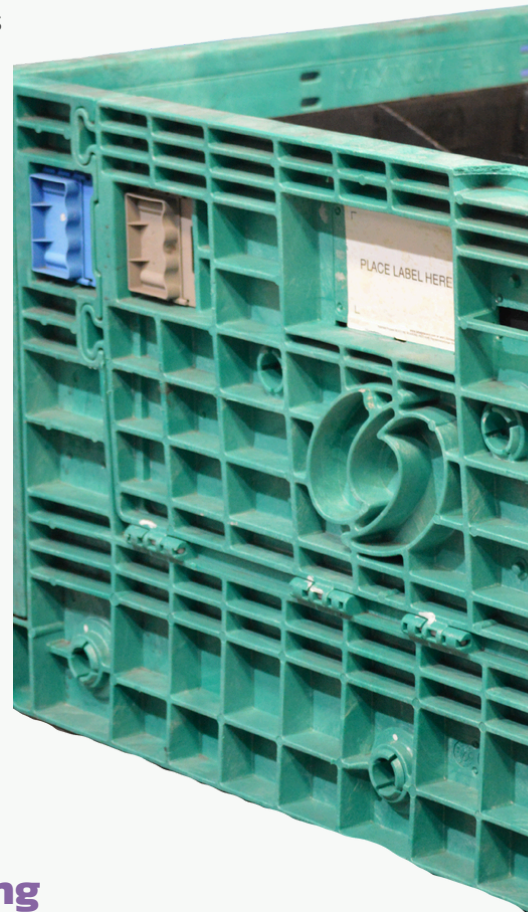

Managing inventory and returns is easier when every container is clearly tagged. Extera provides plain, barcoded, and RFID tags in multiple colors and sizes so you can track items throughout your supply chain. Whether you need quick visual identification or advanced digital scanning, ID tags integrate seamlessly into your operation.

- Plain, barcoded, or RFID tags
- Multiple color and size options

Label Holders

Containers don't have to be permanent. Label holders give you flexibility by allowing information to be updated as often as needed. Clip-on, adhesive, or built-in designs ensure barcodes and IDs stay visible and secure during handling. This reduces errors, streamlines audits, and improves overall warehouse efficiency.

- Heavy-duty plastic or ABS label holders
- Sticker-backed inserts or mountable options

Scoutwise™ Asset Tracking

Take container management further with Scoutwise, Extera's [asset tracking software](#). Scoutwise gives you complete visibility into your packaging inventory, from location tracking to usage monitoring.

- Real-time asset tracking across facilities
- Data-driven insights for better utilization
- Prevents loss and extends container life
- Supports compliance and sustainability goals

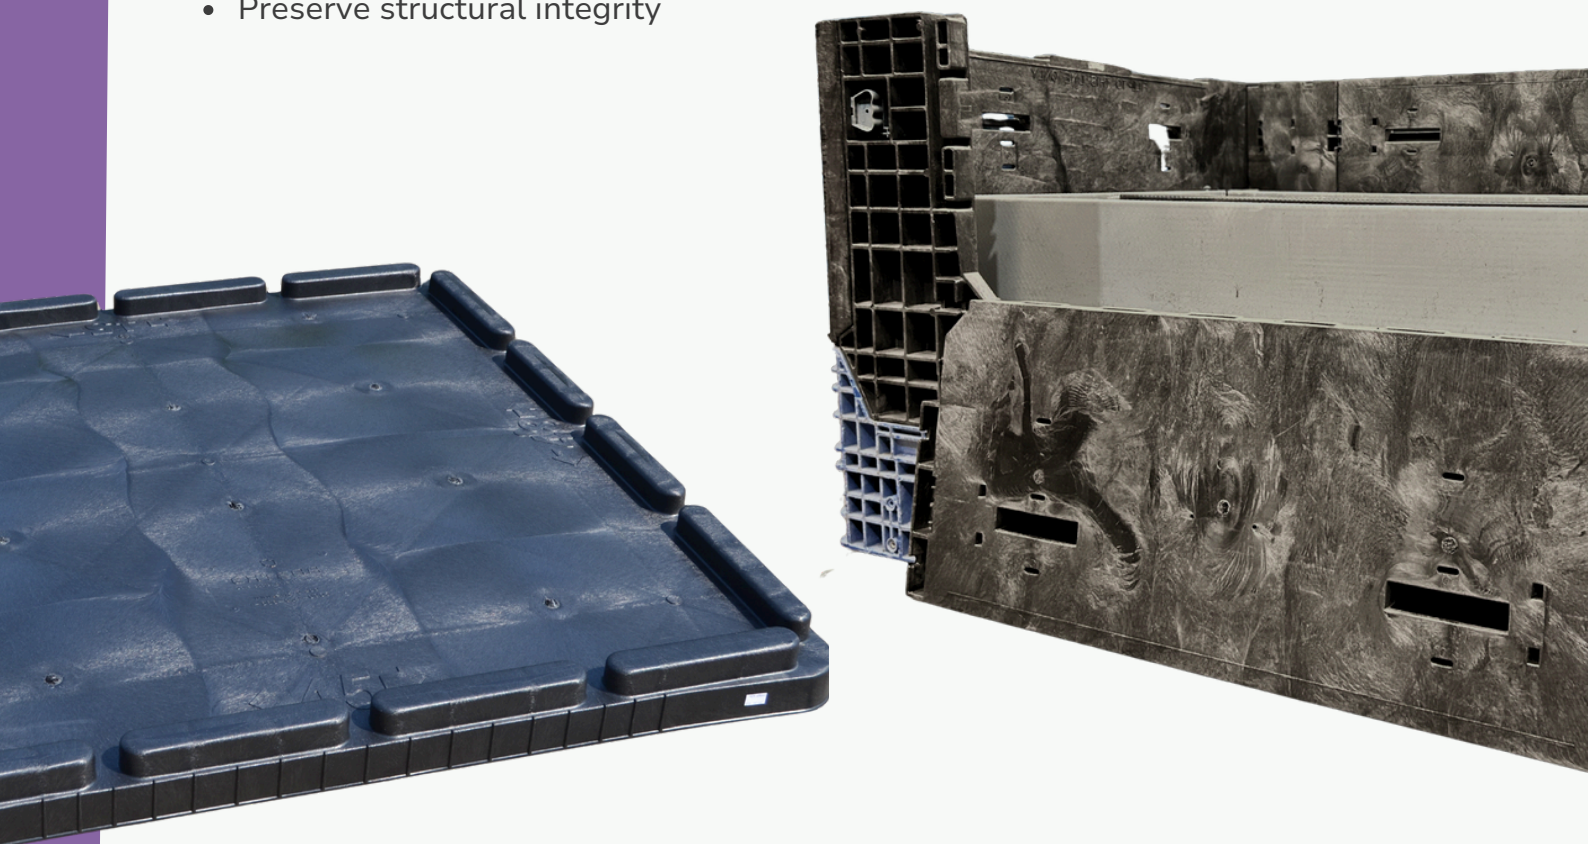

CUT & WELD

External Custom Features

Custom Container Sizes

Not every product fits into standard containers. Extera's cut-and-weld service modifies height, width, or depth to create containers perfectly sized for your products. This saves space, reduces material waste, and makes stacking and storing more efficient.

- Adjust height, width, and depth
- Improve stacking and storage efficiency
- Preserve structural integrity

Custom Lid Sizes

A secure lid is the first line of defense when protecting your goods, all while allowing for safe stacking and storage. Options include hinged, snap-fit, or reinforced lids for heavy-duty use.

- Sized to fit custom or standard containers
- Multiple styles: hinged, snap-fit, reinforced
- Enhanced product protection and stability

Why Businesses Choose Extera

At Extera, customization isn't an add-on. It's an integrated system with more innovative designs and sustainable packaging. With long-standing vendor partnerships, we bring you the best in U.S.-based manufacturing. We also go beyond supply: when your custom containers need service or reach end-of-life, our in-house repair and recycling programs keep materials in circulation and your operation moving.

Working with Extera means:

- Packaging engineered for your products and process
- Features that streamline efficiency, safety, and tracking
- You have a long-term partner invested in sustainability and efficiency
